

How a Bluetooth-based contact tracing app could work

Contact tracing apps are currently being discussed as part of the strategies to lift the lockdown by most European governments in an attempt to control the spread of COVID-19. These apps should warn people when they have been close to a person infected by COVID-19 as well as about appropriate next steps (such as self-quarantine, testing or providing advice in case of symptoms). This visual represents how contact tracing apps could operate.
